RMT: Respiratory Muscle Training

Three pillars of better breathing

**Learn to
Breathe Right**

**Strong Breathing
Muscles**

**Bigger Lung
Capacity**

Airofit increases accessible lung capacity in 4 weeks

- Accessible lung capacity measurement before training with Airofit
- Accessible lung capacity measurement after 4 weeks of Airofit

Lung function and life expectancy

*Pulmonary function is a long-term predictor
of mortality in the general population*

University of Buffalo

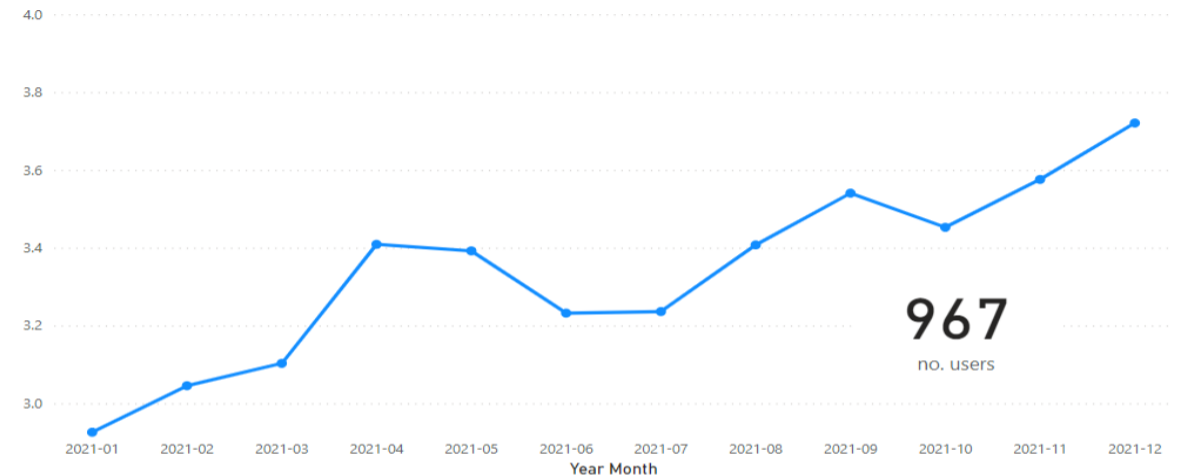

Examples of Airofit users with respiratory issues

+22% in Lung Capacity in Asthmatics
+26% in Lung Capacity in those suffering from COPD

Average Accessible Lung Capacity (ALC) - members with Asthma

Average Accessible Lung Capacity (ALC) - members with COPD

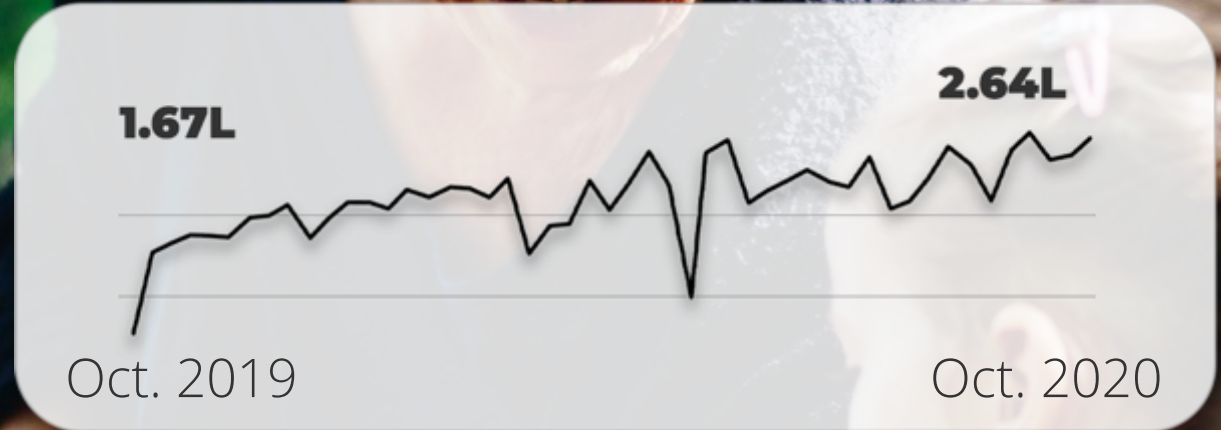

Pia's story

From breathlessness and hopelessness to grandkids and new hobbies

+58% in Lung Capacity

+56% in Respiratory Strength

Mike's story

COPD, Covid-19 and a passion for long-distance cycling

+52% in Lung Capacity

+300% in Respiratory Strength

Airofit is based in science and backed by research

Disease

Evidence

COPD

IMT improves the inspiratory muscles, physical ability, reduces breathing difficulties and improves the quality of life (fx Yun, R., et al., 2021, Zhang, F., et al., 2021, Beaumont, M., et al, 2018)

Asthma

IMT strengthens the inspiratory muscles (Silva, 2013) and reduces the use of asthma medication (Weiner, P., et al., 1992)

Heart disease

Inspirational muscle training improves the inspiratory muscles, physical ability, reduces breathing difficulties and improves the quality of life (Zhuang, 2021)

Our ongoing studies

- Breathing Exercises in **Patients With Covid Induced Dyspnea** (Baritone)
- The influence of **telerehabilitation** focused on respiratory muscle training on the functional status **of patients with the respiratory system diseases.**
- Combined inspiratory and expiratory muscle training – a pilot study to evaluate training feasibility and short-term **effects in healthy volunteers.**
- **Respiratory training in systemic sclerosis patients:** a promising countermeasure of dyspnoea and pain.

The Airofit respiratory training system

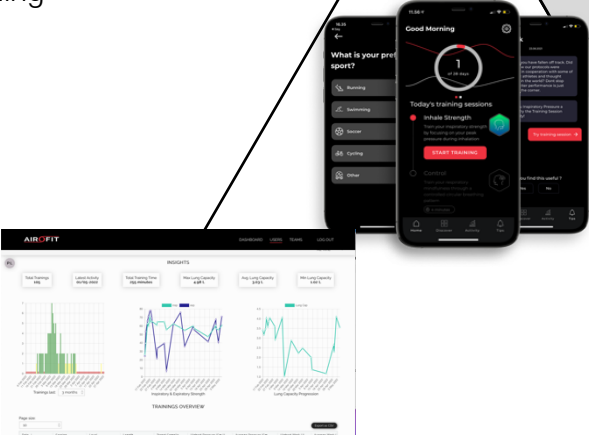

THE BREATHING TRAINER

Sleek design and fitting in the palm of a hand.

It sets us apart from all competitors on the market

APP & EXPERT MODULE

Uniquely built to let the user generate goal focused training programs.

The training system

AIROFIT

Let's do this together:

- Test Airofit with Danish users in one or more municipalities
- Participate in projects / collaboration with citizens who can train with Airofit as a supplement to their rehabilitation
- Contact Mathilde: mah@airofit.com
- +45 5355 7503
